## On-Line Capabilities

MEDTOX clients can access a number of key service items via the internet. These are as follows:

### eChain®

The **MEDTOX** eChain® System is the first of its kind...a web-based, paperless drug testing management system! The eChain® System allows a corporate hiring manager to track every step of the PROFILE® collection and testing process including when (and if) the donor arrived at the clinic, when the specimen was collected, tested, and sent to the lab, if necessary. In this case, the system tells you when the specimen arrived at the lab.

### QuikResults®

Managers can obtain all drug test results and PDF copies of the final custody-and-control forms through this system. Cascading permission levels allow both individual site managers and corporate program directors to view applicable results.
